Brand Ethos

We are creating a beautiful world where nothing is wasted.

We believe everything has value beyond single purpose, and waste is both an opportunity and a challenge. We are enabling a world where we live in tune with nature, where every plant has a song and the husk is valued as much as the grain.

Circularity is the only sustainable way of living within our earth's limits

At eha, we are building a beautiful world where nothing is wasted, everything has value beyond single purpose and where husk is valued as much as the grain.

eha products are made following the three guiding pillars of circularity, from product concept to its end of life.

01 eliminate waste & pollution

Made with crop-waste, and other recovered materials, eha products eliminate waste right at the beginning of the product lifecycle.

02 reuse products & materials

eha products are built to last for many years with best-in-class design and quality. They can be recycled after extensive use.

03 regenerate natural systems

By making products with materials that can be reused, repurposed and recycled many times, eha supports regeneration of nature.

The linear 'take - make - dispose' system, which depletes natural resources and generates waste, is deeply flawed and can be productively replaced by a restorative model in which waste does not exist as such but is only food for the next cycle

Ellen MacArthur

Our 4E promise

Elevate

by contributing
to a better
planet & future

Engage

to uplift farmer
and rural
communities

Experience

superior quality
products meet
global standards

Ensure

QR code provides
product origin & its
footprint

We learn from nature, & collaborate with it. Nature is circular; natural growth comes from regeneration, not exploitation. eha is one of the opportunities to build circular economy, which reuses, replenishes & renews even as it grows. Looking beyond circularity, eha is committed to green economy that promises social inclusion & wellbeing for all.

Mahadev Chikkanna

Our impact

Our primary purpose include 2 of the 17 UN sustainable development goals.

- Reduce CO2 emissions through biocomposites
- Preventing crop-burning to cut emissions
- Sequestering carbon from crop waste

- Utilizing circular & renewable feedstock
- Creating durable, high-quality products
- Enabling zero-waste manufacturing process

We also support 12 additional UN Sustainable Development Goals.

By evaluating our footprint, we uncover avenues for significant positive change.

2000 tons

CO2 reduced

identical to avoiding emissions from 700 cars in a year

600 tons

crop-waste used

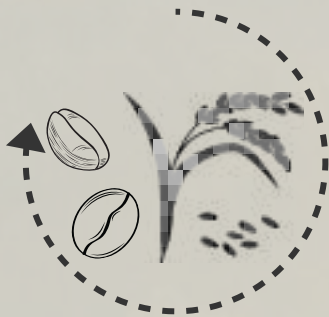

comparable to preventing 125 acres of crop burning

800 tons

fossil plastic reduced

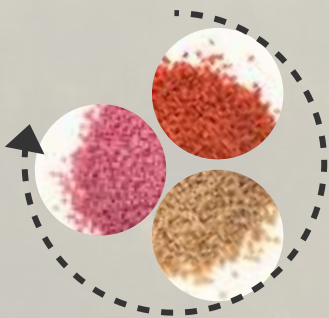

that's how much 26,000 adults consume plastic in a year

Products made with complete accountability & transparency

01 crop-waste - the feedstock

We source rice husk, coffee husk, bamboo, etc from farm or factory that results in value to such crop-waste

02 biocomposites - the foundation

We blend crop-waste with suitable binders to make biocomposite materials with our proprietary IP & infrastructure

03 eha - earth-friendly products

Our qualified partners mould best-in-class eha products from biocomposite materials that we make

04 bundle - your guilt-free products

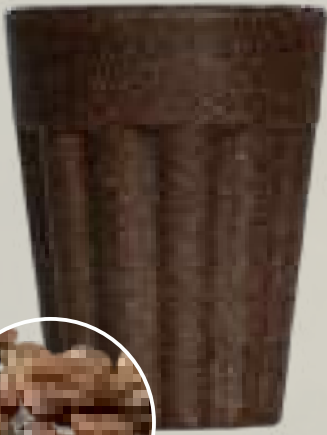

We bundle eha products together as per your needs & choice. our qualified partners do the printing if necessary

05 pack - with responsible packing

Products are packed with minimalistic design, using circular materials sourced from our qualified partners

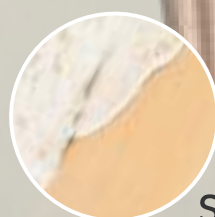

Products are made with nature inspired colors

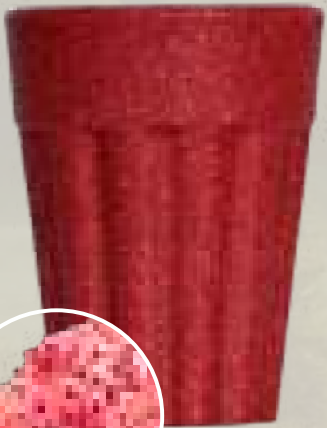

coffee

tortilla

sand castle
